RE: xxx

(Contractor) will be working near your property at XXX on the referenced project. As part of the construction specifications I have been subcontracted to complete pre and post condition surveys for the properties near construction. A licensed engineer completes these assessments along with me as well.

The condition surveys are at no charge to you. The surveys take approximately 30-45 minutes and will include still photography, videos and sketches as necessary, and will focus on areas of concern and areas closest to the work. The survey is conducted on the exterior and interior, usually starts in the basement and progresses to all above ground floors focusing on the general structural portions including but not limited to; concrete floors, ceilings, foundations, drywall, windows, plaster, brick, tiles, sidewalks, driveways, fencing, and landscaping.

**Please call or email me as soon as possible to arrange an appointment or decline**
